

ZIPPE - Partner for the international glass industry

OUR PROGRAMME

Engineering, Construction, Installation, Commissioning

FLOAT GLASS

CONTAINER GLASS

FIBER GLASS

SPECIAL GLASS

Supplying the melting furnace with batch of correct composition and homogeneity on call around the clock – this is the target of ZIPPE batch plants operating successfully worldwide.

BATCH PLANTS

An electronic control system meeting the up-to-date standard is an absolute “must” for guaranteeing a reliable and reproducible plant operation

Recycling plants for inhouse glass waste (hot and cold end) is compulsory for modern glass factories. Scraping conveyors are key components for those systems.

CULLET PROCESSING SYSTEMS

Float, container, fiber or tableware glass – ZIPPE offers the right type of crusher for all kinds of glass to be broken and reused for remelting.

To charge batch and cullet in the right quantity and procedure convenient for the melting furnace – this is the target of ZIPPE batch chargers.

Various models for all types of glass and furnaces are available.

BATCH CHARGERS / GLASS LEVEL CONTROLLERS

ZIPPE glass level controllers monitor reliably the glass level in melting furnaces.

The mechanical glass level controller is operating with a scanning platinum electrode and the optical one is operating with a halogen light beam reflected by the glass surface.

- Manufacturing
- Electronic Control Systems
- Plant Modernizations
- Supervision
- After-Sales Service

ENGINEERING & KNOW-HOW

Using own developed hardware and software being continuously checked and upgraded offers the up-to-date technical standard to our customers.
